

## Exciting news from Beechwood Dental

# Are you looking for vintage glamour without the vintage wrinkles?

Well look no further!

Visit Beechwood Dental in Boscombe, Bournemouth.

£150 for up to 3 areas  
(crows feet, forehead & frown lines)

**Anthony Inman**, our Dental Surgeon, has been trained by Professor Bob Khanna who is a leading cosmetic and reconstructive Dental Surgeon in London.

'Dr Bob' was one of the first Dental Surgeons in the World to venture into facial aesthetic procedures utilising Botulinum Toxin and Dermal Fillers in 1997. Shortly after, due to his success with such treatments, he pioneered the concept of hands on training courses for other medical and dental professional colleagues and helped develop Dento-Facial aesthetics globally.

### Why do some people want to rejuvenate their wrinkles?

Our face is prone to developing lines and wrinkles as we age. In some people the effect is more profound and makes them appear older than their age. Thankfully, these signs can easily be alleviated using **Botulinum Toxin** treatment. **Botulinum Toxin** injections are [FDA](#) approved for cosmetic use and plays a pivotal role in wrinkle and exaggerated facial expression reduction. It's annually used by millions throughout US and UK and has been in circulation for more than two decades for treating various ailments. Botox injections are completely safe, effective, fast acting and easily administered via an injection under the skin.

### How does Botulinum Toxin work?

Understanding how **Botulinum Toxin** injections creates the "lift" effect requires taking a look "behind the scenes". Our face is a network of connecting muscles which are responsible for controlling and regulating our facial expressions.

There are muscles that lift a portion of the face (the frontalis muscle of the forehead) and opposing muscles that pull it down (the glabella). For example **Botulinum Toxin** injections, which acts as a muscle relaxant, is administered into the muscle responsible for pulling forehead and brows down, the opposing muscle which works in tandem i.e. muscle that lifts the brow will become more dominant and results in that portion being lifted.

This exemplifies eyebrows being lifted, a "non-surgical brow lift". Point to be noted that this being a non-invasive option the effects aren't as profound or long lasting as surgery.

### Botulinum Toxin can reduce the appearance of crow's feet, frown lines, forehead furrows and laughter lines.

The eyes are known as the window to the soul, but they can also be a dead giveaway to the age of the person behind them. Problems with the eye area may even make you appear older than you truly are, or at the very least, tired or unhappy, even when you aren't. Whether a drooping brow, excess skin on the eyelid, lines ("crow's feet") around the eyes, or "bags" or dark circles under the eyes.

The condition of skin around the eyes is indicative of a person's age and tends to develop problems such as:

- Drooping brow
- Excess skin on the eyelids
- Lines ("crow's feet") around the eyes
- "Bags" or dark circles under the eyes

These make you look older than you are and also exude a negative vibe of being worried or tired. **Botulinum Toxin** injections can help rejuvenate these lines and eliminate these problems.

### **Bunny Lines**

Wrinkles which appear on both sides of the nose when you smile are called Bunny Lines.

Bunny lines appear naturally in majority of people but are considered a sign of aged skin. Another reason could be previous injections which have paralyzed the glabella i.e. the space between the eyebrows and lower forehead. To compensate for the paralysis the muscles become hyperactive and result in bunny lines.

### **Upper lip wrinkles**

There are few contributing factors that cause wrinkles to appear on the upper lip such as

- Over exposure to sun
- Smoking
- Advance age

These wrinkles are known as perioral wrinkles and have a tendency to become permanently etched on the face in form of creases and folds. Perioral wrinkles get exacerbated with advancing age.

### **Hyperhidrosis – Excessive Sweating**

Hyperhidrosis is the medical term used for 'Excessive Sweating'. Excessive Sweating can have an adverse effect on a person's daily routine such as forcing frequent change of clothes every few hours, causes clammy hands / feet and erodes self-confidence. An estimated 2-3% of westerners reportedly suffer from excessive sweating of the underarms (axillary hyperhidrosis) or of the palms and soles of the feet (palmoplantar hyperhidrosis). Underarm problems tend to start in late adolescence, while palm and sole sweating often begins earlier, around the age 13 (on the average). Untreated, these problems may continue throughout life. At Beechwood Dental we can provide **Botulinum Toxin** Hyperhidrosis Treatment at very competitive rates. You no longer have to seek expensive and in most cases useless treatments to alleviate excessive sweating.

- Visible Results In Just A Few Days
- Very Safe & Effective. Effect Can Last From 4-6 Months! Saves Costs On Antiperspirants, Laundry. Soaps, etc.
- Higher dose of **Botulinum Toxin** used to ensure excellent result.
- Free Consultation

**Botulinum Toxin May Stop Sweat Production by up to 90%?**

Join our relaxed Facial Rejuvenation  
clinics on Fridays between 2pm and 5pm  
Superb, competitive prices.

Booking essential.
