

# Do you want naturally brighter, less sensitive and healthier teeth?

With our latest technology, it's as easy as 1, 2, 3

Beechwood Dental has invested in a state-of-the-art aqua cut jet spray polishing system using Syc<sup>®</sup> - a technologically proven product that brightens teeth by up to four shades and soothes sensitivity leaving you with a smooth and sparkling smile.

You can now have naturally brighter, less sensitive and healthier teeth with Syc<sup>®</sup> polishing by visiting our 5-star walk-in hygiene service called Polish and Go.

## 1 Cleaner & brighter

Syc<sup>®</sup> cleans teeth quickly and painlessly, removing all stains including those from tobacco, coffee, tea and red wine. Syc<sup>®</sup> tastes great and restores the natural lustre and brilliance of healthy teeth without any side effects, helping to give you that bright smile you desire.

## 2 Sensitivity relief

This unique formulation provides long-lasting protection against sensitivity from hot and cold foods and drinks, which can be maintained thorough good oral hygiene and regular treatment from your dentist and hygienist. Just one dental visit should deliver significant relief to sensitivity and discomfort. Syc<sup>®</sup> particles quickly block the dentine tubules, that can cause sensitivity, and are transformed into a hard tooth-like material that bonds to natural tooth.

## 3 Protect & soothe

Syc<sup>®</sup> is sprayed onto tooth surfaces and seeks out and forms a tooth-like layer over vulnerable areas where dentine is exposed.

**This fantastic service allows you to see the hygienist without having to see our dentist first and gives you the freedom to choose which treatment best suits you.**

# Caring for your smile - naturally

## The benefits of Sylc® polishing

- Cleaner, healthier teeth
- Brighter smile
- Restores the natural lustre and appearance of healthy teeth
- Provides quick desensitisation upon application
- Stain removal from foods, coffee, tea, wine and tobacco
- Non-invasive painless procedure

## FAQs

### **What should I expect during & after treatment?**

You should expect to have a “sandy” feeling on your teeth. Don’t worry; these are the natural minerals attaching to the tooth surface. The “sandy” feeling will go away leaving you with bright and smooth teeth. Sylc® is sprayed painlessly onto the tooth and is often performed before and/or after your thorough hygiene clean.

### **How long should I wait to eat or drink?**

It is recommended to wait an hour after your treatment so that the minerals have formed the protective enamel like layer.

### **How often should I be treated with Sylc®?**

We recommend that you have Sylc® polishing after every cleaning appointment.

### **Are there any side effects?**

Sylc® has been approved for cleaning, polishing and desensitisation and no side effects have been reported.
